A SERVICE OF UTILIX

UtilIX Hits One Billion Dollar Mark

Wednesday May 17, 7:44 pm ET

SEATTLE--(BUSINESS WIRE)--May 17, 2006--UtilIX® Corporation, the global leader in life-extension technologies for power and telecommunication cable, is proud to announce that it has surpassed the billion dollar mark. The billion dollars does not represent revenue for the company -- rather, **it is the estimated dollar savings UtilIX's customers have achieved over the last seventeen years utilizing UtilIX's patented CableCURE® silicone injection technology** to restore their aging cables. UtilIX's customers comprise many of the best known and largest power and telecommunication companies; three-quarters of the top 50 power utilities (based on miles of underground cable) in the United States benefit from this technology.

In the late 1960s both utilities and telephone companies began to bury their cables. This practice intensified throughout the 70s and 80s. Many of these cables are nearing the end of their useful life and are experiencing failures. Customer demand for reliable systems is higher than ever, requiring significant budgets to address the problem. At substantially less cost than traditional cable replacement, CableCURE injection technology has restored reliability to more than 70 million feet (21,341 Km) of cable. The success rate exceeds 99%, allowing customers to improve overall cable reliability at lower cost, and UtilIX backs up its service and technology with a 20-year warranty.

UtilIX, a subsidiary of InfrastruX Group Inc. and Tenaska, offers its proprietary, patented CableCURE injection service and other reliability and testing services throughout the United States and serves international customers through subsidiaries and licensees in dozens of countries on four continents. For more information on UtilIX Corporation or CableCURE injection technology, please visit: www.utilix.com or call 800-252-0556 in the United States and 253-395-0200 from outside the U.S.
